

Gilberto Isaias Gonzalez Cisneros

SENIOR FULL STACK & AI SYSTEMS ENGINEER

Tlajomulco de Zúñiga, Jalisco, Mexico gilbertoglez1999@hotmail.com linkedin.com/in/gilbertoglez

PROFESSIONAL SUMMARY

Full Stack Engineer with extensive experience building scalable web platforms, AI-assisted workflows, desktop automation tools, SaaS systems, and cloud-based applications. Proven background implementing robust architectures and performance optimizations in Unix/Linux ecosystems. Expert at leveraging advanced scripting and APIs to automate complex operational and financial data workflows.

TECHNICAL SKILLS

Backend:	Python, Django, Flask, FastAPI, Node.js, Express.js, PHP, Laravel, REST APIs, JWT Authentication
Frontend:	React.js, JavaScript, Tailwind CSS, React Hooks, Axios, HTML, CSS
Databases:	SQL, PostgreSQL, SQL Server, MySQL, Supabase, Query Optimization
Cloud & DevOps:	AWS EC2, Docker, Linux VPS, Unix Environments, Ubuntu Server, Windows Server, Cloudflare, Vercel, GitHub Actions, SSH, SSL deployment
AI & Automation:	OpenAI APIs, TensorFlow, OpenCV, Selenium, BeautifulSoup, Pandas, NumPy, automation workflows, chatbot integrations

PROFESSIONAL EXPERIENCE

Development Engineer HEZA	2025 – Present Mexico
- Developed and maintained core platforms <i>heza.com.mx</i> and <i>cedet.heza.com.mx</i> using React.js, Node.js, Django, Flask, Tailwind CSS, and Axios. - Built internal dashboards and CRM tools for managing workshops, events, metrics, and dynamic operational workflows, leveraging secure relational databases. - Debugged and improved backend systems for core operational and financial workflows driven by SQL Server, MySQL, and PostgreSQL. - Developed Python-driven AI-assisted reporting workflows and contextual chatbot integrations using OpenAI APIs to simplify operational query generation. - Created desktop automation tools with Python for Excel processing, multi-source file unification, payroll receipt extraction, PDF processing, and dynamic database operational data management. - Built fiscal obligation validation dashboards using Python to automate file searches, metrics tracking, audit validation, and reporting workflows. - Integrated OpenStreetMap APIs and automated news generation workflows using structured scraping pipelines. - Administered cloud deployments and web infrastructure environments over production Unix/Linux servers (including SSL configurations, SSH administration, and VPS management).	

Full Stack Developer | [MaximizeAI](#)

2024 – 2025 | Mexico

- Developed automation workflows and chatbot systems for hotel-oriented platforms with structured data persistence in **MySQL**.
- Optimized frontend and backend applications utilizing **Python** scripts for large-scale asset manipulation, responsive design, loading speeds, and advanced image processing (including automated uploads, aggressive compression, cropping, and watermarking) deployed across production **Unix/Linux** server environments.
- Implemented lazy loading, preloading strategies, and web application performance improvements across deployment pipelines to reduce overhead.
- Developed large-scale automated scraping systems using Selenium and BeautifulSoup.
- Built backend automation services and AI-assisted microservices using Flask and FastAPI.

New Product Introduction Engineer | [Foxconn](#)

2022 – 2025 | Mexico

- Developed and deployed analytical dashboards using **Python** for industrial KPI tracking, engineering metrics, and real-time project progress visualization across operational teams.
- Automated reporting and data-engineering pipelines using **Python**, optimized **SQL** database queries, Pandas dataframes, and automated Excel spreadsheets.
- Built operational dashboards for centralized project monitoring, milestones tracking, and task progress reporting.

Full Stack Developer | [Wisscrow](#)

2020 – 2022 | Mexico

- Maintained, debugged, and optimized legacy PHP Laravel applications through framework migration and modern syntax refactoring.
- Developed a robust local ATM-oriented desktop application using C#.

PERSONAL PROJECTS

[OmniStoreSaaS](#)

Developed a multi-tenant SaaS platform architecture using React.js, Express.js, Supabase, Stripe, Cloudflare security routing, and cloud-based AWS infrastructure.

[AI & Computer Vision Utilities](#)

Created computer vision architectures using **Python**, OpenCV, and TensorFlow for facial recognition systems and coin detection; engineered custom internal automation scripts and micro-tools.

EDUCATION

Bachelor's Degree in Computer Engineering | [Universidad de Guadalajara](#)

2018 – 2023 | Mexico
